# Accounts

iTouch Accounts

Accounts module allows you to control your in-house accounts either credit accounts or debit (pre-paid) accounts. The EPOS system controls all aspects of accounts from database maintenance to customer invoices generated on the point-of-sale in either standard receipt format or A4 format.

Features

Specifications

- Credit limits and controls
- Accounts can be given a credit limit, when the maximum credit has been reached additional invoices to this account are disabled unless payment is received
- Pre-paid accounts ensures that funds are available before a transaction can be completed
- Accounts can be assigned a specific price level for all or specific products e.g. Price1 is General Public Price, Price2 is Student Price.
- VAT/Tax levels can be assigned to Account Groups enabling automatic tax shift per account
- Preset discounts can be applied to specific departments so that discount can be applied on a certain range of products but not on another e.g. 5% off food but not drinks
- Flat discounts can be applied to specific accounts
- Meal plan balances can be applied by Account group and can be reset daily, weekly or monthly
- Invoicing and pro-forma invoicing
- Accounts can be finalised by Code, Magnetic Swipe card, Mifare proximity card, Barcode card, Bio-metric fingerprint or vein reader
- Account payments can be received either at the POS, in the Back Office on the Web or via Revaluation Units
- Full audit trail of all account transactions can be viewed/printed, includes Invoices, Credit Notes, Payments & Adjustments
- An invoice may be recalled and the goods and services purchased viewed on screen or printed
- Account statements can be printed from the back office either for an individual account, all accounts or by a range of account groups
- Manual credit or debit adjustments can be performed against an account from the back office
- An enquiry can be made against an account displaying credit limit and available credit, this can be viewed or printed in receipt format
