

→ Stock Control

→ iTouch Stock Control

Studies show that an average of 4% of inventory in retail is lost through shrinkage caused by internal or external theft. Stock control allows complete tracking of stock items from ordering through to delivery, routine physical stock takes can isolate shrinkage and greatly deter internal theft.

→ Features

Specifications

- Provides fast and efficient control of the movement of goods within a business
- Protects and monitors theft and wastage
- Keep stock information up-to-date in real-time and streamline your supply chain processes
- Fully integrated Purchase Orders generate suggested orders for suppliers based on optimum stock levels or manual order quantities
- Orders can be created manually or via handheld unit
- Orders can be printed, emailed or exported to suppliers
- Purchase orders can be easily recalled and ordered quantities accepted or amended, stock levels are then automatically updated against products
- On the fly orders can be delivered directly to stock
- Returned, wasted or damaged goods can be entered reducing theoretical stock levels
- Wastage can be entered in the back office or point-of-sale
- Multi branch stock locations can be configured within the system enabling stock to be transferred/ delivered from a central location or multiple locations
- Physical stock taking enables the input of actual stock levels either manually or using a hand-held stocktaking device
- Stock takes can be limited to certain products, groups of products or all products and can be performed over any required period, daily, weekly, monthly or anything in between
- Variance reports automatically highlight any discrepancies between actual stock levels and theoretical stock levels meaning you can pinpoint any variances at a glance
- Margin control by Profit Amount or Retail Price
- Margin control by Target GP% automatically highlights products below set target
- Multiple suppliers, case sizes & cost prices
- Recipes allows complete control of recipe & menu planning
- Ingredients assigned to menu products takes the guesswork out providing accurate cost calculations
